

# PANEL DATA SHEET

## PSi 30 - 1.600,00 KG/MC

The panel consists of mineral support material inert monolayer original KNAUF INTEGRAL, density  $\geq 1600 \text{ kg/m}^3$  with a nominal thickness of 30 mm, of calcium sulphate bound with fibers with high mechanical resistance. The material is certified to class A1 according to EN 13501-1. It also has several important certifications in the environmental field, such as IBR or VOC. The bottom side is coated, according to the needs, with a choice of materials that improve the characteristics. The panels are edged in plastic material antisqueak, a nominal thickness of 0.45 mm and a height equal to that of the panel. The nominal size of the panel depends on the caliber of the ceramic. The reduced dimensional tolerance causes the panel falls into Class 1 according to the reference standard EN 12825.

### COMPOSIZIONE

#### 1 CORE

Modular monolayer panel of calcium sulphate, high density (1.600kg / mc) constituted of gypsum and cellulose fibers totally free from asbestos and particles of wood. Obtained with processes that ensure high homogeneity of mechanical characteristics and dimensional stability of the product

#### 2 EDGE TRIM

Made of plastic material compound antisqueak, a nominal thickness of 0.45 mm and a height equal to that of the panel, totally free from PVC and self-extinguishing (class V0 UL94 standard)

#### 3 TOP FINISH

Gres Porcelain

#### 4 BOTTOM FINISH

Aluminum foil thickness. 0.05mm ensures excellent barrier against humidity and fire and electrical continuity to the floor. Plate phenolic laminate that increases the stiffness, the mechanical characteristics and constitutes a moisture barrier

#### 5 BOTTOM FINISH

Steel plate / pan of galvanized steel of thickness 0.5 / 0.9 mm which increases the stiffness, the mechanical characteristics and an excellent moisture barrier
